

NEW CAPABILITY · EXAM READINESS OS, PHASE 1

The Exam Readiness Score

One transparent number that tells a student exactly how prepared they are for their target exam — and exactly why, down to the last percentage point. No black box, no guessing, no promise of a rank it can't keep.

Prepared for: Customer feature briefing

Covers: Student experience · How the score is calculated · What academic teams do to power it

WHY WE BUILT THIS

1 A Student Already Has Five Numbers — Just No Single Answer

Every RajyaRank student already sees real, honest numbers on their dashboard: an average test score, a study streak, a course-completion percentage, a weekly-goal ring. Each one is true. None of them, alone or side by side, answers the one question a student actually asks: **"Am I actually ready for this exam?"** They're left doing the mental math themselves — and most don't.

The Exam Readiness Score doesn't replace those numbers. It combines the ones that matter into a single, weighted, fully explained percentage — visible right where the student already looks first: their dashboard.

HOW IT WORKS · FOR STUDENTS

2 One Score, Five Honest Ingredients

The score is a weighted average of five measurable dimensions — every one of them computed from something the student actually did, never estimated or guessed:

Concept Mastery

35%

Accuracy across every exam concept the student has been tested on — not just an overall test average, but broken down to the specific idea (e.g. "Reasonable Classification" inside Fundamental Rights).

Syllabus Coverage

20%

What share of the exam's mapped concepts has the student actually studied or been assessed on — so "ready" reflects real breadth, not just strength in whatever they happened to practise most.

Revision Retention

20%

Of the concepts a student has touched, how many were revisited recently — via a lesson or a test — catching the classic "learned it once, forgot it since" gap before exam day does.

Test Efficiency

15%

Average score specifically across tests for the student's own target exam — kept separate from their all-time average so switching exam goals doesn't distort the number.

Consistency

10%

Real activity across the last 7 days — the same daily-habit signal that already powers the student's streak tracker, reused here rather than invented twice.

The transparency principle: tapping "How is this calculated?" opens the exact breakdown above, with the exact weights and the exact percentage the student earned in each one — every time. If a student asks "why is my score 62%?", the app already has the answer on screen.

WHAT IT WILL NEVER DO

3 Preparation Evidence — Never a Selection Prediction

Government exam results depend on far more than what happens inside a learning app — official cut-offs, competition, and factors no platform can see. RajyaRank draws a firm line here:

The Exam Readiness Score measures preparation evidence inside RajyaRank. It does not predict selection, rank, cut-off, or exam outcome — and it never will. This isn't a disclaimer buried in fine print; it's printed directly inside the explainer modal every time a student opens it.

HOW IT WORKS · FOR ACADEMIC TEAMS

4 Powered by a New Concept Graph — Built Once, Reused Everywhere

A readiness score needs something finer-grained than "Subject" or "Topic" to measure mastery against. This release adds a new **Concept Graph** — a per-exam layer of specific, syllabus-level ideas that sits alongside (not inside) the existing course curriculum, so the same concept can be reinforced by lessons and questions across different courses that teach the same exam.

1

Build the tree
Academic staff create a concept tree per exam — e.g. Fundamental Rights → Reasonable Classification — from a new admin screen.

2

Tag content
Existing lessons and questions get linked to the concepts they teach or test — a one-time tagging pass, not a rebuild.

3

Students take tests
Every test attempt automatically updates concept-level mastery in the background — no extra step for the student.

4

Score stays current
The readiness score recomputes live every time it's viewed — always reflecting the student's most recent activity.

ROLE	WHAT CHANGES FOR THEM
Content Admin / Academic Head	New "Concept Graph" screen to author the concept tree per exam and tag lessons/questions to it — gated by the same permission as all other curriculum tools.
Student	A new readiness gauge on their dashboard, updating automatically as they study and test — no new action required from them at all.
Institution / Super Admin	A foundation for future phases — mistake-pattern coaching and institute-wide risk alerts, both planned next, build directly on this same concept graph.

See it live

This brief covers what the feature does and why it's built this way. The best next step is a short walkthrough on staging — taking a real test as a student and watching the readiness score update in real time.
